

ABSTRACT

2 The present invention relates to a system and method for providing a web-based
3 graphical user interface to a legacy insurance data process system to increase the
4 functionality and ease of use in issuing insurance quotes and policies, providing
5 insurance information and other insurance related services. The system and method
6 integrate use of Internet technology in business work flows, provide dynamic data entry
7 for insurance coverage packages and pricing programs, offer easy access to value-added
8 products and services, and enable local printing of professional insurance applications,
9 proposals and forms to facilitate immediate delivery of professional-quality proposals to
10 customers.
